

V3 End-of-Day Financial Strategies

August 16, 2026 · STRATEGY_DISCOVERY_V3 · DISCOVERY_V3_EOD_PAPER_V1

DISCOVERY QUALIFIED · HOLDOUT PENDING · PAPER ONLY

Purpose. This guide explains the four V3 candidates shown on Atlas: two financial-statement strategies, each monitored at 20- and 60-session holding periods. They cannot place live orders.

Executive summary

Ten preregistered candidates were tested. Four candidates—two families at two fixed horizons—passed every economic gate and the fixed Holm-10 multiple-testing adjustment. They remain research candidates until the sealed holdout can be evaluated after **October 27, 2026**.

Common paper-trading process

1. Read a newly accepted quarterly financial filing from Massive.
2. Compare it with the same fiscal quarter one year earlier.
3. Apply the family-specific accounting rules.
4. Before entry, require prior close $\geq$ **\$5** and median 20-session `close` $\times$ `volume` $\geq$ **\$5 million**.
5. Record a paper purchase at the intended next eligible NYSE session’s official open.
6. Exit at the 20th or 60th eligible session’s official close; entry counts as session 1.
7. Deduct **20 basis points** of round-trip research cost.

Every qualifying symbol is tracked independently. A session without a qualifying filing is recorded as `NO_TRADE`.

Fundamental acceleration

Idea: find companies where growth and operating quality improve together.

Revenue growth At least 15% versus the same quarter one year earlier.	Gross-margin improvement At least 2 percentage points year over year.
Operating cash flow Current quarterly operating cash flow must be positive.	Market gates \$5 price floor and \$5M median dollar-volume floor.

Atlas model	Horizon	Trades	Mean net	Profit factor	95% block CI	Holm-10 p
V3_FA_H20_EOD	20	411	3.733%	2.128	2.167%–5.245%	0.000500
V3_FA_H60_EOD	60	398	8.349%	2.396	5.247%–11.514%	0.000500

Cash-flow quality

Idea: find profitable companies whose reported earnings are strongly supported by improving cash generation.

Net income Current quarterly net income must be positive.	Cash conversion Operating cash flow ÷ net income must be at least 1.25.
Cash-flow growth Operating cash flow must exceed the same quarter one year earlier.	Revenue Revenue growth must be non-negative year over year.

Atlas model	Horizon	Trades	Mean net	Profit factor	95% block CI	Holm-10 p
V3_CFQ_H20_EOD	20	1,385	2.359%	1.954	1.454%–3.221%	0.000500
V3_CFQ_H60_EOD	60	1,341	4.539%	2.023	3.217%–5.819%	0.000500

What each Atlas field means

SOLD Completed paper positions.	OPEN Positions awaiting entry or currently held.
NO OPS Sessions with no qualifying filing.	AVG Average net return among completed paper positions.
RETURN Compounded completed-position return.	Purchase Official open used for paper entry.
Current / sale Latest close while held, or official exit close.	Position Pending entry, held, sold, or no trade.
Held Eligible sessions completed versus target.	Paper value Starting capital adjusted by the row's marked net return.

Qualification gates

All four candidates passed minimum trade, symbol, and signal-session counts; positive means in all three chronological folds; positive early and late halves; a positive lower block-bootstrap bound; the horizon-specific mean-return floor; profit factor; and Holm-10 significance.

Campaign disposition

- **Qualified:** fundamental acceleration and cash-flow quality at H20 and H60.
- **Retired:** short-volume exhaustion, short-interest covering, and forward-split attention.
- **Holdout:** May 1–July 31, 2026 signal window; outcomes sealed through October 27, 2026.
- **Operational separation:** the EOD monitor uses separate storage and does not load the sealed holdout signal store.

Timing implementation audit. The historical catalog already advanced a filing to its next session, and the historical simulator advanced once more. Historical entries may therefore have occurred one session later than the preregistered wording. The operational monitor has been corrected to use the catalog's next-session date directly. Historical figures are discovery evidence, not exact confirmation of the corrected timing; the sealed holdout remains confirmatory.

Interpretation

A historical “QUALIFIED” result means the candidate passed the frozen discovery gates. It does not mean the strategy is guaranteed to work, has passed the sealed holdout, or is approved for real-money execution. Forward Atlas results must not be used to tune thresholds.
